

Proposal

We're making a website on what outfit to wear based on the weather of the day. Our project is useful because if you are struggling on finding an outfit to wear, this website will help you wear something that is fit for the weather. We will be using HTML, CSS and Javascript. There's going to be a bootstrap carousel, a weather widget, a description on the outfit and a link to the outfit. The carousel is going to be the most complicated part because it's hard to make it work properly. We're going to have an animated weather icon and multiple outfit recommendations for each weather in the carousel. We'll also add a link to the where you can buy the outfit.

List of 20 milestones:

1. Make outline of website
2. Setup the basic code for the website (add pages and buttons and everything)
3. Apply background and the layout (easy)
4. Make weather widget
5. Download bootstrap and start carousel
6. Figure out weather icon animation
7. Brainstorm outfits for women
8. Start looking for outfits online
9. Finalize carousel and input outfits into carousel
10. Add link to each outfit (easy)
11. Brainstorm outfits for men
12. Start looking for outfits online
13. Finalize carousel and input outfits into carousel
14. Add link to each outfit (easy)
15. Write descriptions for the outfits chosen
16. If no space for men, make a second page or make a parallax scrolling page
17. Fix all errors
18. Any additional add-ons we might consider to add
19. Fix other errors from the improved version of the website
20. Make sure everything is aligned and set up properly before submitting the final outcome. (easy)
21. The user can write a review on the outfit picked
22. Icons for the outfit brands
23. Customize weather animation / automatically pick outfit
24. Add user profile and log in
25. Suggest the online user outfits from their personal closet.

We're going to do one milestone each week except for the small and easy milestones. We actually aren't going to split up our workload as partners because we are going to go to each other's houses to work on the project together as one.
